new agarose gels in bead form

Sepharose®

(Prepared according to S. Hjertén, Uppsala) for gel filtration of viruses and very high molecular weight macromolecules such as proteins, polysaccharides and nucleic acids.

| Sepharose 4B | Approx. fractionation range (Mw) 300,000—3 million |
| Sepharose 2B | Approx. fractionation range (Mw) 2 million—25 million |

Separation of 32P-labelled adenovirus and poliovirus on Sepharose 2B.

Purification of a crude preparation of satellite tobacco necrosis virus on Sepharose 4B.

LIVINGSTONE MEDICAL BOOKS

CLINICAL VIROLOGY
R. H. A. SWAIN and T. C. DODDS
324 pages, 241 illustrations, 75s.
The essential quality of this book is the continual stress that it places on the application of scientific virological methods to solve clinical problems of diagnosis. It is concerned with pathogenesis, clinical pathology, epidemiology, control and prophylaxis of virus infections in man. The topics included in the book are dealt with in considerable depth and much time and thought has gone into the selection of essentials and in eliminating the confusion of masses of technical details. A feature of the book are the strikingly clear illustrations which illustrate the major topics without unnecessary repetition or variation.
