JOURNAL OF VIROLOGY

A Publication of the American Society for Microbiology

This dynamic new journal is the result of the growth of the former Virology Section in the Journal of Bacteriology. The purpose of the Journal of Virology has been clearly defined as 'devoted to the dissemination of fundamental knowledge concerning viruses of bacteria, plants, and animals'. Journal content is drawn from original research in all areas of basic virology—biochemistry, biophysics, genetics, immunology, morphology, and physiology.

Contents of a recent issue:

Mechanism of Enhancement of Virus Plaques by Cationic Polymers. CRAIG WALLIS AND JOSEPH L. MELNICK.

A Mathematical Analysis of Concomitant Virus Replication and Heat Inactivation. D. J. M. PURIFOY, J. A. PURIFOY, AND B. P. SAGIK.

Antiviral Activity of Antiserum Specific for an Influenza Virus Neuraminidase. E. D. KILBOURNE, W. G. LAVER, J. L. SCHULMAN, AND R. G. WEBSTER.

Transcription of the Genomes of Type 1 and Type 3 Reoviruses. L. PREVEC, Y. WATANABE, C. J. GAUNNT, AND A. F. GRAHAM.

Structure and Leukemogenic Activity of a Murine Leukemia Virus. L. DE TKACZEWKI, E. DE HARVEN, AND C. FRIEND.

Adenovirus Transformation of Hamster Embryo Cells. BRUCE C. CASTO.

Herpes Simplex Virus Products in Productive and Abortive Infection. II. Electron Microscopic and Immunological Evidence for Failure of Virus Envelopment as a Cause of Abortive Infection. SUSAN B. SPRING, BERNARD ROIZMAN, AND JEROME SCHWARTZ.

Ultrastructure of Lymphocystis Virus. LUTZ O. ZWILLENBERG AND KEN WOLF.

Physiological and Genetic Aspects of Abortive Infection of a Shigella sonnei Strain by Coliphage T7. R. HAUSMANN, BEATRIZ GOMEZ, AND BEVERLY MOODY.

Adsorption of Bacteriophages to Adhesions Between Wall and Membrane of Escherichia coli. M. E. BAYER.

Characteristics of Bacteriophages Attacking Psychrophilic and Mesophilic Pseudomonads. R. H. OLSEN, ELEANOR S. METCALF, AND JAMES K. TODD.

Published monthly, one volume a year beginning January.

Volume 2 current in 1968.

Subscription price per year: £9. 6s. 6d.

THE WILLIAMS & WILKINS COMPANY
BALTIMORE, MARYLAND, U.S.A.21202

BAILLIÈRE, TINDALL & CASSELL, LTD.
7 & 8 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.2
The Biology of Animal Viruses

By Frank Fenner

The John Curtin School of Medical Research
The Australian National University
Canberra, A.C.T., Australia

A detailed and integrated presentation of the biology of animal viruses, including a bibliography of more than 2500 references.

Volume I
MOLECULAR AND CELLULAR

CONTENTS:
The Classification and Nomenclature of Animal Viruses
The Morphology and Ultrastructure of the Virion
The Chemical Composition of the Virion and Its Components
The Structure and Function of the Animal Cell
The Initiation of Infection
The Replication of Deoxyriboviruses
The Replication of Riboviruses
Morphological and Functional Changes in Infected Cells
Viral Genetics: Mutation, Recombination, and Reactivation
Mixed Infections: Interference, Complementation, and Phenotypic Mixing
Interferons: Investigations at the Cellular Level

BIBLIOGRAPHY AUTHOR INDEX—SUBJECT INDEX.
1968, 501 pp., $18.50

Volume II
THE PATHOGENESIS AND ECOLOGY OF VIRAL INFECTIONS

CONTENTS:
The Pathogenesis of Viral Infections: Spread of Viruses through the Vertebrate Organism
The Pathogenesis of Viral Infections: The Immune Response
The Pathogenesis of Viral Infections: Genetic Resistance and Non-Immunological Factors in Resistance
Latent Infections and Viral Persistence: Slowly Progressive and Endogenous Viral Diseases
Oncogenic Deoxyriboviruses
Oncogenic Riboviruses
Prophylaxis and Therapy of Viral Infections
The Ecology of Animal Viruses: The Spread of Viruses in Populations of Vertebrates
The Ecology of Animal Viruses: Changes in Virus and Host

BIBLIOGRAPHY AUTHOR INDEX—CUMULATIVE SUBJECT INDEX FOR VOLUMES I AND II.
1968, about 400 pp., $18.50
THE BIOLOGY OF ANIMAL VIRUSES
by Frank Fenner
The John Curtin School of Medical Research
The Australian National University
Canberra, A.C.T., Australia

A detailed and integrated presentation of the biology of animal viruses, including a bibliography of more than 2500 references.

Volume I: MOLECULAR AND CELLULAR BIOLOGY
Contents:
The Classification and Nomenclature of Animal Viruses
The Morphology and Ultrastructure of the Virion
The Chemical Composition of the Virion and Its Components
The Structure and Function of the Animal Cell
The Initiation of Infection
The Replication of Deoxyriboviruses
The Replication of Riboviruses
Morphological and Functional Changes in Infected Cells

FLUORESCENT ANTIBODY METHODS
by Morris Goldman, Bionetics Research Laboratories, Inc.
Falls Church, Virginia
with a foreword by Albert H. Coons

A critical guide to fluorescent antibody techniques providing critical assessment of equipment, reagents, and methods currently employed in immunocytochemical staining; detailed recommendations with quantitative evaluations for filters, microscope components, and lamp housings; specific references to the literature for producing high-titered antiserum to individual antigens, and step-by-step directions for preparing antoglobulin sera; labeling techniques for all the commonly used fluorescent tags, as well as references to less common fluorochromes that have been coupled successfully to proteins; and detailed controls to establish specificity of staining, and full particulars on methods for reducing non-specific reactions.
1968, 303 pp., $13.50

INSECT VIROLOGY
by Kenneth M. Smith
The University of Texas, Austin, Texas

A comprehensive exposition of modern basic methods and techniques employed in virology is provided in this four volume treatise. The work describes and discusses a wide variety of methods in terms of limitations, advantages and accuracy. The contributors were selected on the basis of their understanding and extensive knowledge of a given method, either as creators of the techniques described, as their chief exponents, or as recognized authorities.

Volume 4: 1968, 730 pp., $31.00
Volume 3: 1967, 677 pp., $27.00
Volume 2: 1968, 682 pp., $28.00
Volume 1: 1967, 642 pp., $26.00
in four volumes

Methods in VIROLOGY
edited by Karl Maramorosch, Boyce Thompson Institute for Plant Research, Yonkers, New York

Hilary Koprowski, The Wistar Institute of Anatomy and Biology, Philadelphia, Penna.

A comprehensive exposition of modern basic methods and techniques employed in virology is provided in this four volume treatise. The work describes and discusses a wide variety of methods in terms of limitations, advantages and accuracy. The contributors were selected on the basis of their understanding and extensive knowledge of a given method, either as creators of the techniques described, as their chief exponents, or as recognized authorities.

Volume 4: 1968, 730 pp., $31.00
Volume 3: 1967, 677 pp., $27.00
Volume 2: 1968, 682 pp., $28.00
Volume 1: 1967, 642 pp., $26.00
in four volumes

Methods in IMMUNOLOGY AND IMMUNOCHEMISTRY
edited by Curtis A. Williams and Merrill W. Chase
Rockefeller University, New York City

Covers the basic methods employed for research in immunology and immunochemistry. Practical procedures with operational details are presented, accompanied in each case by discussions of the problems and common pitfalls. The first four volumes fix the base and breadth of methodology. Subsequent volumes will be devoted to updating or enlarging certain areas in current research.

Volume 1: PREPARATION OF ANTIGENS AND ANTIBODIES
1968, 479 pp., $22.00, $18.70

Volume 2: PHYSICAL AND CHEMICAL METHODS
1968, 408 pp., $22.00, $18.70

Volume 3: ANTIGEN-ANTIBODY REACTION
in preparation

Volume 4: STUDIES WITH ANIMALS, CELLS AND TISSUES
in preparation

*Special 15% price reduction valid only on subscription orders for the complete set received before publication of the last volume.
