Just one of the masterpieces from The Corning Collection in glass and plastic

CORNING® disposable roller bottles are made from polystyrene and fitted with wadless screw caps. They are supplied sterile and ready for use; each in its own individual sleeve pack. The specially treated culture surface of 490cm² not only gives optimum cell attachment and growth, but also has excellent optical clarity. Bottles are designed to fit standard roller apparatus and economise in space. Each product batch is tested for sterility, toxicity, cell growth and leakage. Write direct for details or ask your local distributor.

Look for CORNING DISPOSABLES—a name you can rely on in disposable laboratory products.
