Another important journal from Butterworths

Vaccine

Editor: R.E. Spier
(University of Surrey, Guildford, UK)

Vaccine-related research is vital to healthcare and agricultural programmes the world over and VACCINE aims to cover every aspect of this crucial work. VACCINE is the only journal to deal exclusively with the design, production and use of both human and veterinary vaccines. VACCINE spans the spectrum of research and development and links the producer and the user of vaccines in a way which promotes awareness and understanding of their mutual interests and aims.

VACCINE is published quarterly and read by people who are presently active in:
- Laboratory scale development of potential immunogens and their evaluation
- Scale-up laboratory discoveries to determine efficacy, safety and prospects of commercialization
- Full scale commercial production
- Control of vaccines
- Administration and evaluation of the efficacy of vaccines
- Ethical and social considerations
- Public Health – the recognition of socially debilitating infectious disease

REGIONAL EDITORS:

P. Manning
(University of Adelaide)
Australian Regional Editor

F. Horaud
(Institut Pasteur, Paris)
European Regional Editor

S. Plotkin
(Philadelphia Children's Hospital, USA)
American Regional Editor

I. Azuma
(Hokkaido University)
Japanese Regional Editor

B. Griffiths
(CAMR, Porton Down)
UK Regional Editor
