Current Topics in AIDS
Volume 1
Edited by M. GOTTLIEB, D. JEFFRIES, D. MILDVAN,
A. PINCHING, T.C. QUINN and R.A. WEISS
This important and authoritative new series will report topics of current interest in AIDS. In this first volume, leading and active researchers from the USA and Europe have contributed a collection of review articles on different areas of this rapidly-expanding field.
Each subject has been carefully chosen for its topical interest, especially where the editors felt that data had accumulated to a point where critical analysis would be both timely and helpful.
Collating literature in this way not only provides a clear introduction for both specialist and non-specialist alike, but also helps to identify areas of consensus, disagreement or lack of information, and thus provides a stimulus for future research.
Whilst the subject matter of the series will be of primary interest to those working on the human immunodeficiency virus itself, many other specialists in biology and medicine will find the advances forced by the pace of AIDS research applicable to their own work.

Novel Diarrhoea Viruses
Ciba Foundation Symposium 128
Chairman: R.F. BISHOP
Diarrhoea is responsible for many millions of infant deaths in developing countries. In 50% of cases of infant diarrhoeal disease the causative agent is not identified. Diarrhoecal outbreaks in adults and in farm or domestic animals can also present serious problems.
This book concentrates on the 'novel' diarrhoea viruses, which have emerged as an important cause of diarrhoea in both humans and animals. The 'novel' or atypical rotaviruses (non-group A), the enteric adenoviruses, several types of small round virus (including astroviruses, caliciviruses and Norwalk virus) and the group of Berne and Breda viruses are all examined. Research workers from various disciplines present the current state of knowledge and discuss the nature of these viruses, their identification and their histopathological effects. Immunological problems in vaccine development and research needs in the field of novel diarrhoea viruses are also considered.

Wiley books are available through your bookseller. Alternatively, order direct from Wiley (payment to John Wiley & Sons Ltd). Credit card orders accepted by telephone — (0243) 829121 or FREEFONE 3477.
