PLANT

Amino Acid Sequence Homology of Coat Proteins as a Basis for Identification and Classification of the Potyvirus Group. By D. D. SHUKLA and C. W. WARD .

Cowpea Mosaic Virus RNA Replication in Crude Membrane Fractions from Infected Cowpea and Chenopodium amaranticolor. By R. EGGEN, A. KAAN, R. GOLDBACH and A. VAN KAMMEN .

Evidence that Virus Translocation and Virus Infection of Non-wounded Cells Are Associated with Transmissibility by Leaf-feeding Beetles. By R. C. GERGERICH and H. A. SCOTT .

ANIMAL

Induction, Persistence and Strain Specificity of Haemagglutinin-specific Secretory Antibodies in Lungs of Mice after Intragastric Administration of Inactivated Influenza Virus Vaccines. By K.-S. CHEN and G. V. QUINNAN, JR .

The DNA Sequences of the Long Repeat Region and Adjoining Parts of the Long Unique Region in the Genome of Herpes Simplex Virus Type 1. By L. J. Perry and D. J. McGeoch ........................................ 2831–2846
Mechanism of Recognition of Herpes Simplex Virus Type 1-infected Cells by Natural Killer Cells. By J. A. López-Guerrero, B. Alarcón and M. Fresno ........................................ 2859–2868
On the Control of Immediate Early (α) mRNA Survival in Cells Infected with Herpes Simplex Virus. By M. L. Fenwick and S. A. Owen ........................................ 2869–2877
The Products of Herpes Simplex Virus Type 1 Gene UL26 which Are Involved in DNA Packaging Are Strongly Associated with Empty but Not with Full Capsids. By F. J. Rixon, A. M. Cross, C. Addison and V. G. Preston ........................................ 2879–2891
Molecular Cloning and Characterization of Six Genes, Determination of Gene Order and Intergenic Sequences and Leader Sequence of Mumps Virus. By N. Elango, T. M. Varsanyi, J. Kövámees and E. Norrby ........................................ 2893–2900
The A and B Subgroups of Human Respiratory Syncytial Virus: Comparison of Intergenic and Gene-overlap Sequences. By P. R. Johnson and P. L. Collins 2901–2906
Single Amino Acid Change at the Cleavage Site of the Fusion Protein Is Responsible for Both Enhanced Chymotrypsin Sensitivity and Trypsin Resistance of a Sendai Virus Mutant, TR-5. By M. Itoh and M. Homma ........................................ 2907–2911
Characterization of Papillomavirus Polypeptides from Bovine Cutaneous Fibropapillomas. By G. Della Torre, M. Muttini, D. Ballinari, G. Ferrari, M. A. Pierotti and G. Della Porta ........................................ 2919–2924
Characterization of Triatoma Virus, a Picorna-like Virus Isolated from the Triatomine Bug Triatoma infestans. By O. A. Muscio, J. L. La Torre and E. A. Scodeller 2929–2934
