THE FOURTEENTH FLEMING LECTURE

Varicella-zoster virus

A. J. Davison

475–486

PLANT

A temporal study of the expression of the capsid, cytoplasmic inclusion and nuclear inclusion proteins of tobacco etch potyvirus in infected plants

D. A. Baunoch, P. Das, M. E. Browning and V. Hari

487–492

Cylindrical inclusion bodies of wheat streak mosaic virus and three other potyviruses only self-assemble in mixed infections

W. G. Langenberg

493–497

cDNA cloning and nucleotide sequence of the wheat streak mosaic virus capsid protein gene

499–504

De novo generation of cymbidium ringspot virus defective interfering RNA

J. Burgyan, L. Rubino and M. Russo

505–509

ANIMAL

Two vaccinia virus proteins structurally related to the interleukin-1 receptor and the immunoglobulin superfamily

G. L. Smith and Y. S. Chan

511–518

Relative enhancer activity and transforming potential of authentic human papillomavirus type 6 genomes from benign and malignant lesions

A. Farr, H. Wang, M. S. Kasher and A. Roman

519–526

The influence of antisense RNA on transcriptional mapping of the 5′ terminus of a baculovirus RNA

B. G. Ooi and L. K. Miller

527–534

Studies on the genetic control of resistance of black hooded rats to Borna disease

S. Herzog, K. Frese and R. Rott

535–540

Rotavirus infection alters Na+ and K+ homeostasis in MA-104 cells

J. R. del Castillo, J. E. Ludert, A. Sanchez, M.-C. Ruiz, F. Michelangeli and F. Liprandi

541–547

Antigenic relatedness between arenaviruses defined at the epitope level by monoclonal antibodies

549–555

Identification of linear epitopes on Semliki Forest virus E2 membrane protein and their effectiveness as a synthetic peptide vaccine

557–565

</table>
B95a, a marmoset lymphoblastoid cell line, as a sensitive host for rinderpest virus

Evolutionary pathways of N2 neuraminidases of swine and human influenza A viruses: origin of the neuraminidase genes of two reassortants (H1N2) isolated from pigs

Homotypic and heterotypic protection against influenza virus infection in mice by recombinant vaccinia virus expressing the haemagglutinin or nucleoprotein gene of influenza virus

Nature of the endogenous pyrogen (EP) induced by influenza viruses: lack of correlation between EP levels and content of the known pyrogenic cytokines, interleukin 1, interleukin 6 and tumour necrosis factor

Prevalence of antibody to influenza C virus among pigs in Hyogo Prefecture, Japan

Antigenic and genomic identity between simian herpesvirus aotus type 2 and bovine herpesvirus type 4

Nucleotide sequence of a Guinea-Bissau-derived human immunodeficiency virus type 2 proviral clone (HIV-2cAM2)

Antigenic and genomic comparison between non-cytopathic and cytopathic bovine viral diarrhoea viruses isolated from cattle that had spontaneous mucosal disease

Human papillomavirus type 6 and 11 E4 gene products in condyloma acuminata

Nucleotide sequence analysis of three different hepatitis delta viruses isolated from a woodchuck and humans

In vitro propagation of parvovirus B19 in primary foetal liver culture

Myristoylation of foot-and-mouth disease virus capsid protein precursors is independent of other viral proteins and occurs in both mammalian and insect cells

Synthesis of Newcastle disease virus (NDV)-like envelopes in insect cells infected with a recombinant baculovirus expressing the haemagglutinin–neuraminidase of NDV
