</table>
Comparison of hantavirus isolates using a genus-reactive primer pair polymerase chain reaction

567–573

Degradation of cellular mRNA during influenza virus infection: its possible role in protein synthesis shutoff

A. Beloso, C. Martinez, J. Valcárcel, J. F. Santarén and J. Ortín

575–581

Distribution and substrate specificity of intracellular proteolytic processing enzyme(s) for paramyxovirus fusion glycoproteins

N. Kawahara, X. Z. Yang, T. Sakaguchi, K. Kiyotani, Y. Nagai and T. Yoshida

583–590

Location of antigenic sites defined by neutralizing monoclonal antibodies on the S1 avian infectious bronchitis virus glycopolypeptide

A. Kant, G. Koch, D. J. van Roozelaar, J. G. Kusters, F. A. J. Poelwijk and B. A. M. van der Zeijst

591–596

Internalization of intact poliovirus by HeLa cells as shown by subcellular fractionation in isoosmotic Nycodenz gradients

P. Kronenberger, R. Vrijsen, A. Geerts and A. Boeyé

597–605

Poliovirus antigenic hybrids simultaneously expressing antigenic determinants from all three serotypes

A. D. Murdin, H.-H. Lu, M. G. Murray and E. Wimmer

607–611

Identification and characterization of foot-and-mouth disease virus O1 Burgwedel/1987 as an intertypic recombinant

O. Krebs and O. Marquardt

613–619

The nucleotide sequences of wild-type coxsackievirus A9 strains imply that an RGD motif in VP1 is functionally significant

621–626

Shedding of a rhinovirus minor group binding protein: evidence for a Ca2+-dependent process

627–632

Nucleotide sequences of normal and rearranged RNA segments 10 of human rotaviruses

A. Ballard, M. A. McCrae and U. Desselberger

633–638

Autoprocessing of the human immunodeficiency virus type 1 protease precursor expressed in Escherichia coli from a synthetic gene

V. Valverde, P. Lemay, J.-M. Masson, B. Gay and P. Boulanger

639–651

Construction of solid matrix–antibody–antigen complexes containing simian immunodeficiency virus p27 using tag-specific monoclonal antibody and tag-linked antigen

T. Hanke, P. Szawlowski and R. E. Randall

653–660

Sulphate polyanions prolong the incubation period of scrapie-infected hamsters

A. Ladogana, P. Casaccia, L. Ingrosso, M. Cibati, M. Salvatore, Y.-G. Xi, C. Masullo and M. Pocchiari

661–665

Demonstration of a hepatitis C virus-specific antigen predicted from the putative core gene in the circulation of infected hosts

667–672

Typing hepatitis C virus by polymerase chain reaction with type-specific primers: application to clinical surveys and tracing infectious sources

673–679

Extraordinarily low density of hepatitis C virus estimated by sucrose density gradient centrifugation and the polymerase chain reaction

H. Miyamoto, H. Okamoto, K. Sato, T. Tanaka and S. Mishiro

715–718
Baculovirus-expressed glycoprotein H of herpes simplex virus type 1 (HSV-1) induces neutralizing antibody and delayed type hypersensitivity responses, but does not protect immunized mice against lethal HSV-1 challenge.

The herpes simplex virus type 1 tegument protein VP22 is encoded by gene UL49.

Comparison between in vitro neutralization titres and in vivo protection against homologous and heterologous challenge induced by vaccines prepared from two serologically distinct variants of foot-and-mouth disease virus, serotype A22.

Evolution of influenza B/Victoria/2/87-like viruses: occurrence of a genetically conserved virus under conditions of low epidemic activity.

Sequence analysis of M2 mRNA of bovine respiratory syncytial virus obtained from an F–M2 dicistronic mRNA suggests structural homology with that of human respiratory syncytial virus.

Down-regulation of vesicular stomatitis virus transcription by the matrix protein of influenza virus.

H. Ghiasi, R. Kaiwar, A. B. Nesburn and S. L. Wechsler

G. D. Elliott and D. M. Meredith

C. Bolwell, N. R. Parry and D. J. Rowlands

L. Kinnunen, N. Ikonen, T. Pöyry and R. Pyhälä

M. Zamora and S. K. Samal

Z. Ye and R. R. Wagner
