BACTERIAL

**Vibriophage D10 contains non-permuted DNA with cohesive ends**

B. K. Chakrabarti, D. J. Chattopadhyay and A. N. Ghosh

2749–2752

PLANT

**Susceptibility of transgenic tobacco plants expressing tobacco rattle virus coat protein to nematode-transmitted and mechanically inoculated tobacco rattle virus**

A. T. Ploeg, A. Mathis, J. F. Bol, D. J. F. Brown and D. J. Robinson

2709–2715

**Effects of sequence elements in the potato virus X RNA 5’ non-translated zβ-leader on its translation enhancing activity**

2717–2724

**Replication of the DNA A component of African cassava mosaic virus in a heterologous system**

U. Paszkowski, S.-B. Zhang, I. Potrykus and J. Paszkowski

2725–2729

**Expression of potyvirus proteins in insect cells infected with a recombinant baculovirus**

D. W. Thornbury, J. F. J. M. van den Heuvel, J. A. Lesnaw and T. P. Pirone

2731–2735

**Mutations in zucchini yellow mosaic virus helper component protein associated with loss of aphid transmissibility**

F. Granier, M. Durand-Tardif, F. Casse-Delbart, H. Lecoq and C. Robaglia

2737–2742

**Striking similarities between the nucleotide sequence and genome organization of citrus tatter leaf and apple stem grooving capilloviruses**

N. Yoshikawa, M. Imaizumi, T. Takahashi and N. Inouye

2743–2747

ANIMAL

**RNA editing in Newcastle disease virus**

M. Steward, I. B. Vipond, N. S. Millar and P. T. Emmerson

2539–2547

**Identification of helper T cell antigenic sites in mice from the haemagglutinin glycoprotein of measles virus**

O. E. Obeid, C. D. Partidos and M. W. Steward

2549–2557

**Binding of neutralizing monoclonal antibodies to regions of the fusion protein of respiratory syncytial virus expressed in Escherichia coli**

2559–2565

**Conformational constraints of conserved neutralizing epitopes from a major antigenic area of human respiratory syncytial virus fusion glycoprotein**

J. A. López, D. Andreu, C. Carreño, P. Whyte, G. Taylor and J. A. Melero

2567–2577
An immunodominant cytotoxic T cell epitope on the VP7 rotavirus protein overlaps the H2 signal peptide

Influence of the human immunodeficiency virus type 1 Tat protein on the proliferation and differentiation of PC12 rat pheochromocytoma cells

Virus-free survival and down-regulation of CD4 in C8166 cells infected with human immunodeficiency virus type 1 at low density

Characterization and primary structure of a human immunodeficiency virus type 1 (HIV-1) neutralization domain as presented by a poliovirus type 1/HIV-1 chimera

Antisera raised against the second variable region of the external envelope glycoprotein of human immunodeficiency virus type 1 cross-neutralize and show an increased neutralization index when they act together with antisera to the V3 neutralization epitope

The cytopathic effect of human immunodeficiency virus is independent of high levels of unintegrated viral DNA accumulated in response to superinfection of cells

Avian sarcoma virus RNA synthesis, RNA splicing and virus production in human foreskin fibroblasts: effect of co-infection with human cytomegalovirus

Partial cloning of the genome of infectious hypodermal and haematopoietic necrosis virus, an unusual parvovirus pathogenic for penaeid shrimps; diagnosis of the disease using a specific probe

High level expression in *Escherichia coli* cells and purification of poliovirus protein 2A<sup>P0</sup>

Molecular and biological characterization of a non-glycosylated isolate of St Louis encephalitis virus

Identification of seven putative origins of *Autographa californica* multiple nucleocapsid nuclear polyhedrosis virus DNA replication

Mapping of linear B cell epitopes on capsid proteins of bovine papillomavirus: identification of three external type-restricted epitopes

Modification of discrete nuclear domains induced by herpes simplex virus type 1 immediate early gene I product (ICP0)

The human cytomegalovirus 86K immediate early (IE) 2 protein requires the basic region of the TATA-box binding protein (TBP) for binding, and interacts with TBP and transcription factor TFIIB via regions of IE2 required for transcriptional regulation

Quantitative determination of human cytomegalovirus target sequences in peripheral blood leukocytes by nested polymerase chain reaction and temperature gradient gel electrophoresis
Co-replication of several isotypes of foot-and-mouth disease virus

HPLC is an effective and fast method for analysis of viral proteins: a study of encephalomyocarditis virus mutants differing in pathogenicity

Molecular epidemiology of dengue 3 viruses and genetic relatedness among dengue 3 strains isolated from patients with mild or severe form of dengue fever in French Polynesia

A new serotype of the outer capsid protein VP4 shared by an unusual human rotavirus strain Ro1845 and canine rotaviruses

Evidence for different lineages of rinderpest virus reflecting their geographic isolation

Comparative analysis of the immunoprotective abilities of glycosylated and deglycosylated parainfluenza virus type 3 surface glycoproteins

Analysis of the ovine respiratory syncytial virus (RSV) G glycoprotein gene defines a subgroup of ungulate RSV

Isolation and immunogenic properties of a monomeric form of the HA1 subunit of the influenza virus haemagglutinin from infected cells

Sequence analysis of human T cell lymphotropic virus type I strains from southern India: gene amplification and direct sequencing from whole blood blotted onto filter paper

Characterization of vaccinia virus gene B12R

Analysis of protective immune responses to the glycoprotein H–glycoprotein L complex of herpes simplex virus type 1

Human adenovirus type 5 recombinants expressing simian immunodeficiency virus macaque strain gag antigens

CORRIGENDUM

Sequence analysis of bovine adenovirus type 3 early region 3 and fibre protein genes
