Sequential modification of translation initiation factor eIF4GI by two different foot-and-mouth disease virus proteases within infected baby hamster kidney cells: identification of the 3Cpro cleavage site

Rebecca Strong and Graham J. Belsham

*Journal of General Virology* vol. 85, part 10, pp. 2953–2962

A comma was inadvertently removed from the final sentence of the first paragraph of the Introduction, which should read as follows:

They appear to be functionally equivalent and each interacts with a variety of other proteins as well as eIF4E and eIF4A, including the poly(A)-binding protein, eIF3 (associated with the 40S ribosomal subunit) and an eIF4E-specific protein kinase termed Mnk-1 (Gingras *et al.*, 1999).
