Author Index for this issue (v)–(vi)

ANIMAL

DNA viruses

Major tegument protein VP8 of bovine herpesvirus 1 is phosphorylated by viral US3 and cellular CK2 protein kinases
S. L. Labiuk, L. A. Babiuk and S. van Drunen Littel-van den Hurk 2829–2839

Novel virus-associated proteins encoded by UL112–113 of human cytomegalovirus

Phylogeny and primary structure analysis of fiber shafts of all human adenovirus types for rational design of adenoviral gene-therapy vectors
S. Darr, I. Madisch, S. Hofmayer, F. Rehren and A. Heim 2849–2854

Spontaneous tumour development in human papillomavirus type 8 E6 transgenic mice and rapid induction by UV-light exposure and wounding

Bovine papillomavirus type 1 oncoprotein E5 inhibits equine MHC class I and interacts with equine MHC I heavy chain
B. Marchetti, E. A. Gault, M. S. Cortese, Z. Yuan, S. A. Ellis, L. Nasir and M. S. Campo 2865–2870

Establishment of an insect cell clone that harbours a partial baculoviral genome and is resistant to homologous virus infection
Q. Weng, K. Yang, W. Xiao, M. Yuan, W. Zhang and Y. Pang 2871–2876

RNA viruses

Prevalence and genetic variability of tick-borne encephalitis virus in host-seeking *Ixodes ricinus* in northern Italy
G. Carpi, L. Bertolotti, S. Rosati and A. Rizzoli 2877–2883

Origin and distribution of tick-borne encephalitis virus strains of the Siberian subtype in the Middle Urals, the north-west of Russia and the Baltic countries
S. Yu. Kovalev, D. N. Chernykh, V. S. Kokorev, T. E. Snitkovskaya and V. V. Romanenko 2884–2892

Polypyrimidine tract-binding protein is relocated to the cytoplasm and is required during dengue virus infection in Vero cells

Cross-talk between Rac1 and Cdc42 GTPases regulates formation of filopodia required for dengue virus type-2 entry into HMEC-1 cells

Front cover illustration

Phase-contrast images of MDBK cells infected with BoHV-1–GFP–UL47 that had 2-dimethylamino-4,5,6,7-tetrabromo-1H-benzimidazole (DMAT; middle), kenpaullone (bottom) or no inhibitor (top) added 1 h later. Images were captured 24 h after infection. Images courtesy of Sylvia van Drunen Littel-van den Hurk, Vaccine and Infectious Disease Organization, University of Saskatchewan, Saskatoon, SK S7N 5E3, Canada. See the paper by Labiuk *et al.* in this issue, pp. 2829–2839.
Monoclonal antibodies to the West Nile virus NS5 protein map to linear and conformational epitopes in the methyltransferase and polymerase domains

Influence of NS5A protein of classical swine fever virus (CSFV) on CSFV internal ribosome entry site-dependent translation
M. Xiao, Y. Wang, Z. Zhu, J. Yu, L. Wan and J. Chen 2923–2928

Modulation of alpha interferon anti-hepatitis C virus activity by ISG15

Comparative analysis of both genomic segments of betanodavirus isolated from epizootic outbreaks in farmed fish species provides evidence for genetic reassortment

Minor structural protein VP2 in rabbit hemorrhagic disease virus downregulates the expression of the viral capsid protein VP60
L. Chen, G. Liu, Z. Ni, B. Yu, T. Yun, Y. Song, J. Hua, S. Li and J. Chen 2952–2955

Rat respiratory coronavirus infection: replication in airway and alveolar epithelial cells and the innate immune response

Multiple novel astrovirus species in human stool
A. Kapoor, L. Li, J. Victoria, B. Oderinde, C. Mason, P. Pandey, S. Z. Zaidi and E. Delwart 2965–2972

Molecular differences between two Jeryl Lynn mumps virus vaccine component strains, JL5 and JL2
P. Chambers, B. K. Rima and W. P. Duprex 2973–2981

Depletion of measles virus glycoprotein-specific antibodies from human sera reveals genotype-specific neutralizing antibodies

Strong interferon-inducing capacity of a highly virulent variant of influenza A virus strain PR8 with deletions in the NS1 gene
G. Kochs, L. Martinez-Sobrido, S. Lienenklaus, S. Weiss, A. Garcia-Sastre and P. Staeheli 2990–2994

Degradation and aggresome formation of the Gn tail of the apathogenic Tula hantavirus
H. Wang, T. Strandin, J. Hepojoki, H. Lankinen and A. Vaheri 2995–3001

AMP-activated protein kinase facilitates avian reovirus to induce mitogen-activated protein kinase (MAPK) p38 and MAPK kinase 3/6 signalling that is beneficial for virus replication

PLANT

Effects of DICER-like proteins 2, 3 and 4 on cucumber mosaic virus and tobacco mosaic virus infections in salicylic acid-treated plants
M. G. Lewsey and J. P. Carr 3010–3014

The 2b protein of cucumber mosaic virus is essential for viral infection of the shoot apical meristem and for efficient invasion of leaf primordia in infected tobacco plants
A. Sunpapao, T. Nakai, F. Dong, T. Mochizuki and S. T. Ohki 3015–3021
Domain organization of the N-terminal portion of hordeivirus movement protein TGBp1

Sequence characteristics of potato virus Y recombinants

Hibiscus chlorotic ringspot virus upregulates plant sulfite oxidase transcripts and increases sulfate levels in kenaf (Hibiscus cannabinus L.)
X. Zhang and S.-M. Wong 3042–3050

A full-length infectious clone of beet soil-borne virus indicates the dispensability of the RNA-2 for virus survival in planta and symptom expression on Chenopodium quinoa leaves
F. Crutzen, M. Mehrvar, D. Gilmer and C. Bragard 3051–3056

Mutational analysis of eggplant latent viroid RNA processing in Chlamydomonas reinhardtii chloroplast

Dating the origins of the maize-adapted strain of maize streak virus, MSV-A

OTHER AGENTS

Transmissions of variant Creutzfeldt–Jakob disease from brain and lymphoreticular tissue show uniform and conserved bovine spongiform encephalopathy-related phenotypic properties on primary and secondary passage in wild-type mice
D. L. Ritchie, A. Boyle, I. McConnell, M. W. Head, J. W. Ironside and M. E. Bruce 3075–3082
