Author Index for this issue (v)–(vi)

REVIEW

Functions of Tat: the versatile protein of human immunodeficiency virus type 1
B. Romani, S. Engelbrecht and R. H. Glashoff 1–12

Time — the emerging dimension of plant virus studies

ANIMAL

DNA viruses
Glycoprotein G from pseudorabies virus binds to chemokines with high affinity and inhibits their function
A. Viejo-Borbolla, A. Muñoz, E. Tabarés and A. Alcamí 23–31

Characterization of microRNAs encoded by the bovine herpesvirus 1 genome

Quantitative analysis of Epstein–Barr virus (EBV)-related gene expression in patients with chronic active EBV infection

A region at the left end of the fowl adenovirus 9 genome that is non-essential in vitro has consequences in vivo
J. C. Corredor and É. Nagy 51–58

Assembly and export determine the intracellular distribution of hepatitis B virus core protein subunits

The genetic backbone modulates the phenotype of hepatitis B surface antigen mutants
M. A. Beale, S. Ijaz and R. S. Tedder 68–73

Novel circular DNA viruses in stool samples of wild-living chimpanzees

RNA viruses
Genomics and evolution of Aedes-borne flaviviruses

Front cover illustration
Identification of the cell types infected with rat coronavirus sialodacryoadenitis virus (SDAV) in the alveolar region. Merged images of cell markers (green), SDAV (red) and nuclei (blue) of macrophages (top) and alveolar type I (middle) and II (bottom) cells from rat lung paraffin sections. Images courtesy of Robert J. Mason, National Jewish Health, 1400 Jackson Street, Denver, CO 80206, USA. See the paper by Funk et al. in the December 2009 issue of J Gen Virol, pp. 2956–2964.
Genetic characterization of early isolates of Japanese encephalitis virus: genotype II has been circulating since at least 1951
A. J. Schuh, L. Li, R. B. Tesh, B. L. Innis and A. D. T. Barrett 95–102

Involvement of the Fcγ receptor IIA cytoplasmic domain in antibody-dependent enhancement of dengue virus infection
M. L. Moi, C.-K. Lim, T. Takasaki and I. Kurane 103–111

Biochemical characterization of the (nucleoside-2’O)-methyltransferase activity of dengue virus protein NS5 using purified capped RNA oligonucleotides $^{5}$MeGpppAC$_n$ and GpppAC$_n$
B. Selisko, F. F. Peyrane, B. Canard, K. Alvarez and E. Decroly 112–121

Requirement of cellular DDX3 for hepatitis C virus replication is unrelated to its interaction with the viral core protein

Expression of the NS3 protease of cytopathogenic bovine viral diarrhea virus results in the induction of apoptosis but does not block activation of the beta interferon promoter

Comprehensive full-length sequence analyses of human parechoviruses: diversity and recombination

Vitronectin receptors, αv integrins, are recognized by several non-RGD-containing echoviruses in a continuous laboratory cell line and also in primary human Langerhans’ islets and endothelial cells
P. Ylipaasto, M. Eskelinen, K. Salmela, T. Hovi and M. Roivainen 155–165

Characterization of phylogenetically diverse astroviruses of marine mammals

Capsid gene divergence in rabbit hemorrhagic disease virus
M. Kinnear and C. C. Linde 174–181

Molecular evolutionary dynamics of Ross River virus and implications for vaccine efficacy

Differential activation profiles of Crimean–Congo hemorrhagic fever virus- and Dugbe virus-infected antigen-presenting cells

Towards an understanding of the migration of Crimean–Congo hemorrhagic fever virus
M. Mild, M. Simon, J. Albert and A. Mirazimi 199–207

Genetic relatedness of H6 subtype avian influenza viruses isolated from wild birds and domestic ducks in Korea and their pathogenicity in animals

Thogoto virus ML protein is a potent inhibitor of the interferon regulatory factor-7 transcription factor

Regulation of Marburg virus (MARV) budding by Nedd4.1: a different WW domain of Nedd4.1 is critical for binding to MARV and Ebola virus VP40
S. Urata and J. Yasuda 228–234
HLA-C is necessary for optimal human immunodeficiency virus type 1 infection of human peripheral blood CD4 lymphocytes

Neutralization of feline immunodeficiency virus by antibodies targeting the V5 loop of Env
A. Samman, N. Logan, E. L. McMonagle, T. Ishida, M. Mochizuki, B. J. Willett and M. J. Hosie 242–249

High prevalence of neutralizing activity against multiple unrelated human immunodeficiency virus type 1 (HIV-1) subtype B variants in sera from HIV-1 subtype B-infected individuals: evidence for subtype-specific rather than strain-specific neutralizing activity

Characterization of neutrophil extracellular traps in cats naturally infected with feline leukemia virus

PLANT

Sequence diversity, population genetics and potential recombination events in grapevine rupestris stem pitting-associated virus in Pacific North-West vineyards

Pathogenicity of Alternanthera mosaic virus is affected by determinants in RNA-dependent RNA polymerase and by reduced efficacy of silencing suppression in a movement-competent TGB1
H.-S. Lim, A. M. Vaira, M. D. Reinsel, H. Bae, B. A. Bailey, L. L. Domier and J. Hammond 277–287

Single amino acid changes in the turnip mosaic virus viral genome-linked protein (VPg) confer virulence towards Arabidopsis thaliana mutants knocked out for eukaryotic initiation factors eIF(iso)4E and eIF(iso)4G

Selective modification of rice (Oryza sativa) gene expression by rice stripe virus infection

PHAGE

Specific hydrophobic residues in the α4 helix of λ.CII are crucial for maintaining its tetrameric structure and directing the lysogenic choice
