### Front cover illustration

Immunofluorescent staining of QM5 cells transfected with the reptilian reovirus p14 FAST protein (green) and co-stained for beta-coatamer protein (red), a marker of the ER-Golgi complex intermediate compartment (ERGIC). Following treatment with brefeldin A to disrupt protein trafficking, the p14 FAST protein remains associated with the ERGIC (yellow). Images courtesy of Dr Roy Duncan, Department of Microbiology and Immunology, Tupper Medical Building, Room 7S, Dalhousie University, Halifax, NS B3H 4H7, Canada. See the paper by Corcoran et al. in this issue, pp. 162–166.
Dimerization-driven interaction of hepatitis C virus core protein with NS3 helicase
G. Mousseau, S. Kota, V. Takahashi, D. N. Frick and A. D. Strosberg 101–111

The variable regions of hepatitis C virus glycoprotein E2 have an essential structural role in glycoprotein assembly and virion infectivity
K. McCaffrey, H. Goukiani, I. Boo, P. Poumbourios and H. E. Drummer 112–121

Genetic analysis of murine hepatitis virus non-structural protein 16

Induction of mucosal and systemic antibody and T-cell responses following prime–boost immunization with novel adjuvanted human immunodeficiency virus-1-vaccine formulations

CD4 downregulation by the human immunodeficiency virus type 1 Nef protein is dispensable for optimal output and functionality of viral particles in primary T cells
F. Neri, G. Giolo, M. Potestà, S. Petrini and M. Doria 141–150

Varroa destructor is an effective vector of Israeli acute paralysis virus in the honeybee, *Apis mellifera*
G. Di Prisco, F. Pennacchio, E. Caprio, H. F. Boncristiani Jr, J. D. Evans and Y. Chen 151–155

Recombinants between *Deformed wing virus* and *Varroa destructor virus-1* may prevail in *Varroa destructor*-infested honeybee colonies
J. Moore, A. Jironkin, D. Chandler, N. Burroughs, D. J. Evans and E. V. Ryabov 156–161

Homomultimerization of the reovirus p14 fusion-associated small transmembrane protein during transit through the ER–Golgi complex secretory pathway
J. A. Corcoran, E. K. Clancy and R. Duncan 162–166

**DNA viruses**

Herpes simplex virus type 1 strain KOS carries a defective US9 and a mutated US8A gene
A. Negatsch, T. C. Mettenleiter and W. Fuchs 167–172

Cathepsins are involved in virus-induced cell death in ICP4 and Us3 deletion mutant herpes simplex virus type 1-infected monocyctic cells

Lysine residues of interferon regulatory factor 7 affect the replication and transcription activator-mediated lytic replication of Kaposi’s sarcoma-associated herpesvirus/human herpesvirus 8
T. Zhang, Y. Wang, L. Zhang, B. Liu, J. Xie, C. Wood and J. Wang 181–187

Covalent modification by SUMO is required for efficient disruption of PML oncogenic domains by Kaposi’s sarcoma-associated herpesvirus latent protein LANA2

Intraventricular injection of myxoma virus results in transient expression of viral protein in mouse brain ependymal and subventricular cells

Mass identification of transcriptional units expressed from the *Bombyx mori* nucleopolyhedrovirus genome
An RGG sequence in the replication-associated protein (Rep) of *Tomato yellow leaf curl Sardinia virus* is involved in transcriptional repression and severely impacts resistance in Rep-expressing plants

Evolutionary analysis of tomato Sw-5 resistance-breaking isolates of *Tomato spotted wilt virus*

The complete genome sequence and proteomics of *Yersinia pestis* phage Yep-phi

Differentiation of ruminant transmissible spongiform encephalopathy isolate types, including bovine spongiform encephalopathy and CH1641 scrapie

J. G. Jacobs, M. Sauer, L. J. M. van Keulen, Y. Tang, A. Bossers and J. P. M. Langeveld
