Author Index for this issue (v)–(vi)

**ANIMAL**

**DNA viruses**

Re-evaluation of the genome sequence of guinea pig cytomegalovirus
K. Kanai, S. Yamada, Y. Yamamoto, Y. Fukui, I. Kurane and N. Inoue
1005–1020

Recombinant glycoprotein B vaccine formulation with Toll-like receptor 9 agonist and immune-stimulating complex induces specific immunity against multiple strains of cytomegalovirus
V. Dasari, C. Smith, J. Zhang, G. Scott, W. Rawlinson and R. Khanna
1021–1031

Epstein–Barr virus latent gene sequences as geographic markers of viral origin: unique EBNA3 gene signatures identify Japanese viruses as distinct members of the Asian virus family
1032–1043

Sero logic evidence of vertical transmission of JC and BK polyomaviruses in humans
1044–1050

A peptide with similarity to baculovirus ODV-E66 binds the gut epithelium of Heliothis virescens and impedes infection with Autographa californica multiple nucleopolyhedrovirus
W. O. Sparks, A. Rohlfing and B. C. Bonning
1051–1060

Evidence for covert baculovirus infections in a Spodoptera exigua laboratory culture
R. Murillo, M. S. Hussey and R. D. Possee
1061–1070

**RNA viruses**

IL-28B predicts response to chronic hepatitis C therapy – fine-mapping and replication study in Asian populations
1071–1081

Nucleotide requirements at positions +1 to +4 for the initiation of hepatitis C virus positive-strand RNA synthesis
U. Nandasoma, C. McCormick, S. Griffin and M. Harris
1082–1086

Influence of the 5′-proximal elements of the 5′-untranslated region of classical swine fever virus on translation and replication
M. Xiao, Y. Wang, Z. Zhu, C. Ding, J. Yu, L. Wan and J. Chen
1087–1096

Discovery of a small arterivirus gene that overlaps the GP5 coding sequence and is important for virus production
1097–1106

**Front cover illustration**

Healthy (top) and cavemovirus-infected (middle and bottom) Ipomoea setosa leaves. Images courtesy W. J. Cuellar, International Potato Centre, Lima, Peru. See the paper by Cuellar et al. in this issue, pp. 1233–1243.
Novel structural protein in porcine reproductive and respiratory syndrome virus encoded by alternative ORF5, which is present in all arteriviruses
C. R. Johnson, T. F. Griggs, J. Gnanandarajah and M. P. Murtaugh 1107–1116

Antigenic modules in the N-terminal S1 region of the transmissible gastroenteritis virus spike protein

Severe acute respiratory syndrome coronavirus papain-like protease suppressed alpha interferon-induced responses through downregulation of extracellular signal-regulated kinase 1-mediated signalling pathways

Capsid proteins from field strains of foot-and-mouth disease virus confer a pathogenic phenotype in cattle on an attenuated, cell-culture-adapted virus

Preclinical efficacy studies of influenza A haemagglutinin precursor cleavage loop peptides as a potential vaccine

Endogenously expressed matrix protein M1 and nucleoprotein of influenza A are efficiently presented by class I and class II major histocompatibility complexes

Reassortant of low-pathogenic avian influenza H5N2 viruses in African wild birds

Reassorted pandemic (H1N1) 2009 influenza A virus discovered from pigs in Germany

Inactivation of hantaviruses by N-ethylmaleimide preserves virion integrity
T. Strandin, J. Hepojoki, H. Wang, A. Vaheri and H. Lankinen 1189–1198

Old World hantaviruses do not produce detectable amounts of dsRNA in infected cells and the 5’ termini of their genomic RNAs are monophosphorylated
H. Wang, A. Valheri, F. Weber and A. Plyusnin 1199–1204

The cellular endosomal sorting complex required for transport pathway is not involved in avian metapneumovirus budding in a virus-like-particle expression system
