Microbial Genomics 2018;4, doi: 10.1099/mgen.0.000197

There was an error in the legend of Fig. 1 in the published article. A new reference [262] replaced reference [52] and was also added to the last sentence. The legend should read as the following:

Fig. 1. Composite figure demonstrating the prevalence and characteristics of carbapenem resistance in Europe. (a) Percentage of invasive isolates resistant to carbapenem antibiotics as determined by the ECDC in the Antimicrobial resistance surveillance in Europe 2015 report [11]. Each country is coloured according to the percentage of submitted K. pneumoniae isolates that were non-susceptible to doripenem, imipenem or meropenem. (b) Pie charts indicating the distribution of carbapenem resistance mechanisms in K. pneumoniae isolates submitted to the EuSCAPE study [262]. Mechanisms are coloured according to the legend in box B. ‘Other’ mechanisms: no KPC, NDM, OXA-48 or VIM gene detected. (c) Overall number of K. pneumoniae isolates submitted by each participating country in the EuSCAPE study [262].
