Bacto-Sensitivity Discs are sterile paper discs containing known amounts of the more commonly employed antibiotics.

Bacto-Sensitivity Discs are used in determining the relative sensitivity of micro-organisms to antibiotics.

Bacto-Sensitivity Discs are available in three concentrations of the following antibiotics:

- Penicillin
- Streptomycin
- Chloromycetin
- Terramycin
- Dihydrostreptomycin
- Aureomycin

Electron Microscopes by Philips

100 kV Electron Microscope: magnification continuously variable, 1,000 to 60,000 diameters. Two models available — better than 50 Ångstrom units or better than 25 Ångstrom units.

Compact, simple to control, completely safe to operate — these instruments open new fields in submicroscopic research. A special feature is their “oscillating beam” device, which ensures immediate and exact focusing.
