DETECTION OF THE
Salmonella-Shigella
GROUP

- **Bacto-S S Agar**
  is a selective medium especially designed for use in isolation of fastidious *Shigella* and *Salmonella* strains. The selective action of this medium restrains to a large extent the development of coliform bacteria with minimum restriction of fastidious strains of the pathogens. Because of the inhibitive action of the medium on coliform bacteria, it is possible to inoculate the medium heavily with feces thereby greatly increasing the chance of positive isolations from samples containing very few pathogens.

- **Bacto-Bismuth Sulphite Agar**
  is a highly selective medium for isolation of *Salmonella typhosa*. The unusual selective properties of this medium permit the use of large inocula of feces and other suspected material without overgrowth of extraneous intestinal bacteria.

- **Bacto-MacConkey Agar**
  is an excellent differential medium for use in conjunction with Bacto-SS Agar and Bacto-Bismuth Sulphite Agar. This medium supports rapid and luxuriant growth of even the most fastidious strains of the typhoid-dysentery group. Although MacConkey Agar does not inhibit coliform bacteria it does afford excellent differentiation of colonies of pathogens from those of the lactose fermenting bacilli.

- **Bacto-Tetrathionate Broth Base**
- **Bacto-Selenite Broth**
  enrichment media for isolation of intestinal pathogens. These are excellent aids in the detection of carriers and examination of other materials for members of the *Salmonella-Shigella* group.

‘WELLCOME’CULTURE MEDIA

Also supplied by
BURROUGHS WELLCOME & CO. (The Wellcome Foundation Ltd.) LONDON
Contents of Vol. 22, No. 3. October 1955

ORIGINAL ARTICLES

Studies on the secretion of milk of low fat content by cows on diets low in hay and high in concentrates. VI. The effect on the physical and biochemical processes of the reticulo-rumen. C. C. Balch, D. A. Balch, S. Bartlett, M. Patricia Bartrum, V. W. Johnson, S. J. Rowland and Jill Turner.

Intramammary pressure changes in the lactating cow. I. Changes during the milking process. W. G. Whistelstone.

The steam stripping of taints from liquids. III. Batch stripping with particular reference to equilibrium values from batch data. J. K. Scott.

Steam distillation of taints from cream. I. Theoretical considerations and properties of the reference substances, diacetyl and acetoin. F. H. McDowall.

Microscopic appearance of fat on the milk surface as affected by mechanical disturbance of the surface. N. King.

The lactose-chloride contribution to the freezing-point depression of milk. E. R. Cole and M. Mead.

Etc., etc.

THE JOURNAL OF DAIRY RESEARCH

Established in 1929 as a medium for the publication of the results of original research in dairy science and cognate subjects. From Volume 23 the subscription price will be 60/- per volume of 3 parts, payable in advance. Single copies 25/- each. Subscriptions may be sent to any bookseller or direct to the publishers.

CAMBRIDGE UNIVERSITY PRESS, Bentley House, 200 Euston Road, London, N.W.1
