Corrigendum

Prevention of aflatoxin contamination by a soil bacterium of *Stenotrophomonas* sp. that produces aflatoxin production inhibitors

Usuma Jermnak, Amara Chinaphuti, Amnart Poapolathep, Ryo Kawai, Hiromichi Nagasawa and Shohei Sakuda

*Microbiology* (2013), **159**, part 5, pp. 902–912

We used the same PCR primers (omtA, 5’-GGCCGATATCCGAGGCTT-3’ and 5’-CGC-ATGACCACATCCCAAT-3’ described in the section ‘Quantitative real-time PCR (qRT-PCR) analysis of the genes encoding proteins responsible for aflatoxin biosynthesis’ in the Method (p904)) as used in Dioctatin A is a strong inhibitor of aflatoxin production by *Aspergillus parasiticus* (DOI 10.1099/mic.0.2006/005629-0) for analysis of mRNA levels of ‘omtA’ in this paper because we had not noticed the mistake mentioned below.

We would like to correct all uses of ‘omtA’ involved in this paper (in the section ‘Quantitative real-time PCR (qRT-PCR) analysis of the genes encoding proteins responsible for aflatoxin biosynthesis’ in Methods (p904), in the section ‘Effects on the transcription of genes required for aflatoxin biosynthesis’ in Results (p907), in Figs 6c, 7c and 8c and legends of Figs 6, 7 and 8 (p908–909) and in Discussion (p910)) to ‘omtB’.

We have noticed that one of the PCR primers for β-actin (control gene) was misdescribed. We used the primers (5’-AGAGGAAGTTGCTGCTCTCG-3’ and 5’-CATCGTCACCGCGAAA-3’ designed from the partial cDNA sequence of *actin* of *Aspergillus parasiticus*) in all qRT-PCR experiments in the paper (DOI 10.1099/mic.0.2006/005629-0), but we misdescribed the reverse primer as 5’-TTAGAAGCAGCTGGTGTTGACAATGGTTCGGGTATGTGCAA-GGCGGGTTTCGCCGGTGACGATGCCCCCCGTGCTGTCTTCCCCTCCATTGTCGGTCTGGTCCCCGTCATCATGATCATGATGATTGTGACGAGCTCATCTCAGATGATTGACTCTATTGTTGAGCTGCACAGTTCACACAGCTGGTTGTCTCTCGCTTCACCGCTTGATATCTCGAGCAGATGTGGTCTCAAACTCAGGGATGACATGAGAAGATTNGGCATCACACAT-TCTACAAAGAGCTCGTGTTGCTCCCGAGGAGCACCCGGTTTCTCTGACGGAAGC-CCTATCAAACCCAAAGTCCCAGGGTGA

* Partial cDNA sequence of *actin* of *A. parasiticus*

CTGCTACAGAGGAAGTTGCTGCTTCGTCATGGACAATGGTGCCGGTATGTGCGAA-GGCGCGTTCGGCGAGATGCCCCCGCGCCTGCTCTCCCTCCATTGTGCGTCCGGTTCGACCATATGATCATGATGATTGTGACGAGCTCATCTCAGATGATTGACTCTATTGTTGAGCTGCACAGTTCACACAGCTGGTTGTCTCTCGCTTCACCGCTTGATATCTCGAGCAGATGTGGTCTCAAACTCAGGGATGACATGAGAAGATTNGGCATCACACAT-TCTACAAAGAGCTCGTGTTGCTCCCGAGGAGCACCCGGTTTCTCTGACGGAAGC-CCTATCAAACCCAAAGTCCCAGGGTGA

Underlined sequences were used for designing primers.
