DISPOSABLE PETRI DISHES
eliminate time-wasting washing, sterilizing

The Oxoid Disposable Petri Dish is ready for instant use and can afterwards be discarded. Made of clear, moulded polystyrene, it is sterile and biologically inert as well as light in weight and virtually unbreakable.

Because of its low cost and the elimination of washing and sterilizing, Oxoid Disposable Petri Dishes offer considerable economy in use. The dishes are supplied in cartons of 200 or 500. Full details, prices and quantity rates will gladly be sent on application.

NEW Oxoid Disposable Plastic Precipitin Tubes are now available—made from crystal-clear polystyrene, they are chemically clean and ready for immediate use. Further details supplied on request.

"THE BOTTOM DROPPED OUT OF MY BARGE!"

This was the problem someone recently faced. When we heard about it we were sympathetic, for the barge in question was a houseboat, and most of the owner's worldly goods had vanished in the catastrophe.

Many people would not think of looking to bacteriology for the answer. But if they did they would learn that members of the Desulfovibrio group, which are commonly present in soil and water, can corrode steel.

These anaerobic organisms, first described in 1895 by Beijerinck, are capable of reducing sulphates to sulphides. Their activities, often accompanied by the production of hydrogen sulphide, may result in the corrosion of buried iron pipes and the steel hulls of barges.

By the use of Baar's or Starkey's media they are comparatively easy to isolate as crude cultures.
The relation between molecular weight of antigen and ability to elicit passive cutaneous anaphylaxis.
By S. Leskowitz and Z. Ovady.

Failure of rat and rabbit antiserum to passively sensitize normal and pertussis-treated rats and mice so as to induce mast cell damage and histamine release on later contact with antigen. By I. Mota.

The relationship of the haemolytic activity of complement to the concentration of sensitized erythrocytes. By D. L. McVickar.

Immunological studies on adrenal glands. I. Immunization with adrenals of foreign species. By Felix Milgrom and Ernest Witosky.

Immunological studies on adrenal glands. II. Immunization with adrenals of the same species. By Ernest Witosky and Felix Milgrom.

Immunocy to four species of Eimeria in fowls. By M. Elains Rose and P. L. Long.

Antibodies with differing molecular sizes in mice. By J. L. Fahey and J. H. Humphrey.

Studies on the mechanism of non-specific resistance to Brucella induced in mice by vaccination with BCG. By D. Sulitzen, A. Bekkerkunst, Lea Groot and Judith Lorbel.

Immunocy to Eimeria tenella in young fowls (Gallus domesticus). By A. E. Pierce, P. L. Long and C. Horton-Smith.

The prevention of delayed hypersensitivity to homologous serum and transplantation antigens in guinea-pigs. By J. Gordon.

The immunological status of ovarian homografts in fowls. By A. G. Cook.

Studies with immune-adherence. II. The cation cofactor requirements of human complement. By Harold C. Woodworth.

Multiple diphtheria antigen-antibody systems investigated by passive haemagglutination techniques and other methods. By A. J. Fulthorpe.

Further studies on the state of unresponsiveness against skin homografts induced in adult mice of certain genotypes by a previous ovarian homograft. By Owe Lind.
