microbiological reagents and media are the only complete line offered in U.K.

Requirements of the Bacteriologist, Biochemist, Biologist, Pathologist and Pharmacologist can usually be met promptly from our extensive stocks. We shall always be pleased to obtain other items specially to order.

Over 60 years experience ensure

**UNIFORMITY**

**STABILITY**

**ECONOMY**

Our claim that MICROIL is unsurpassed as a microscope immersion oil for routine use is supported by thousands of technicians and research workers in many lands who ask for it by name.

MICROIL is a colourless immersion oil, non-sticky, non-drying and neutral in reaction. It is ideal for use in any part of the world, including the tropics.

The chances are that you already have MICROIL on your bench, if not, write for details of this and other products.

GENETICAL RESEARCH

Volume VI, No. 2

CONTENTS

July 1965

GERSHENSON, S. Induction of lethal mutations in Drosophila melanogaster by DNA

MATHEW, C. The production of recessive lethals by calf-thymus DNA in Drosophila

NASH, D. The expression of ‘Hairless’ in Drosophila and the role of two closely linked modifiers of opposite effect

CASSINGTON, LORNA A. The production and behaviour of diploids of Coprinus lagopus

ABSON, G. C. and LAMPKIN, G. H. Transferrin and pest-albumin polymorphism in East African cattle

SCOTT-EMUAKPOR, M. B. Genetic recombination in Neurospora crassa and N. sitophila

SCOTT-EMUAKPOR, M. B. Interference studies in Neurospora crassa and N. sitophila

MCLAREN, ANNE and WALKER, P. M. B. Genetic discrimination by means of DNA/DNA binding

HOPWOOD, D. A. New data on the linkage map of Streptomyces coelicolor

GRUNERBERG, H., GRAY, JEAN M. and TRUSLOVE, GILLIAN M. Congenital defects as indicators of lifelong abnormal processes

FARGIE, BARBARA and HOLLOWAY, B. W. Absence of clustering of functionally related genes in Pseudomonas aeruginosa

LOW, B. and WOOD, T. H. A quick and efficient method for interruption of bacterial conjugation

The subscription price is £6 net per volume of three parts

Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1
In the fifth annual publication
PERIODICAL FOR
GENERAL MICROBIOLOGY

Morphology, Physiology, Genetics, and
Ecology of Micro-Organisms

Published by F. Egami, Tokyo; J. W. Foster, Austin; O. Hoffmann-Ostenhof, Vienna;
A. A. Iseneckiy, Moscow; G. Ivanovics, Szeged; I. Malek, Prague; R. W. Kaplan,
Frankfort on Main; G. W. Kidd, Amherst; G. Pontecorvo, Glasgow; V. N. Saposs-
nikov, Moscow; J. C. Senez, Marseilles. Editor-in-Chief: W. Schwartz, Greifswald.

The periodical publishes contributions in German, English, or French on all subjects of
general microbiology as well as critical reports and book reviews. Papers of general
interest on related subjects of taxonomy, medicine, technical and agricultural microbiology
are also published.

Annual volume: 5 editions with approximately 400 pages in the size 16.7 × 24 cm, numer-
ous illustrations, art print.

Price per volume: £8. 14s. 6d.

Available through all bookdealers, book importers or the publishers. Publicity leaflets
and sample copies (if available) will be forwarded upon request.

BRITISH MEDICAL BULLETIN

Each Issue a Symposium on an Important Aspect of
Contemporary Medical Research

VOL. 21, No. 3 SEPTEMBER 1965

Recent Research in Molecular Biology

Scientific Editor: R. C. Clowes

Introduction
Physical chemistry of transforming
deoxyribonucleic acid
Biochemistry of deoxyribonucleic acid
and ribonucleic acid replication
Structure and replication of the bac-
terial chromosome
Transfer of genetic material during
bacterial conjugation
Intracellular modification of nucleic
acids
Mechanism of protein biosynthesis
F. H. C. Crick
R. Rownd
R. M. S. Smellie
R. H. Pritchard
Julian D. Gross
K. A. Stacey
H. R. V. Arnstein
Antibiotics, proteins and nucleic acids
The genetic code
Amino-acid-transfer ribonucleic acid:
structure and function
Theories of gene regulation
Interallelic complementation in vivo
and in vitro
Infectious drug resistance
Penicillinase plasmids in Staphylococcus
species
Molecular basis of contractility in
muscle

Order through your local bookseller, or direct from
MEDICAL DEPARTMENT, THE BRITISH COUNCIL
65 DAVIES STREET, LONDON, W. 1

D. S. Nelson. The effects of anticoagulants and other drugs on cellular and cutaneous reactions to antigen in guinea-pigs with delayed-type hypersensitivity.

W. Norton and M. Ziff. The local response in the guinea-pig to self and non-self proteins.

R. J. Cook. Titration of Clostridium oedematiens antitoxin by reversed passive haemagglutination.

D. W. Dresser. Specific inhibition of antibody production. IV. Standardization of the antigen-elimination test; immunological paralysis of mice previously immunized.

T. E. W. Feltkamp and Thea M. Feltkamp-Vroom. Antibodies against the various types of skeletal muscle fibres.

I. M. Roitt, H. E. H. Jones and G. L. Mills. The activity of different fractions of homologous thyroid extract in the production of allergic thyroiditis in the rat.

The subscription price is £12 post free, per two annual volumes of six parts. Single parts are 25s. each, postage extra.
The answer to two questions! Resolving power is a professional demand, while delivery is a practical consideration. Perhaps the many features of the EMU-3H might be succinctly classified under these same headings?

**Professional demands.** Accelerating voltages 50 and 100 kV. Theoretical resolving power is 2.7 Angstroms. This instrument has achieved 5 Angstroms using the Fresnel fringe as the measuring criteria. Focus, magnification and compensation remain constant at 50 and 100 kV. Universal Chamber for hot and cold operation from -140° to 1,000°C. Double condenser lens with choice of 5 preset or continuously variable illumination areas from 75 to 2 microns. Selection of 3 apertures in both condenser lenses. Automatic vacuum system controlled by three push buttons.

**Practical considerations.** Now assembled in Britain to give faster delivery. Available for demonstration at RCA, Sunbury. Built-in power supplies — no external cabinets, single unit installation. Free service guaranteed for one year with optional service contract after first year.

*A booklet, "A complete microscopy system", describes the EMU-3H and is available on request.

The most advanced general-purpose medium yet devised—

OXOID
BLOOD AGAR BASE No. 2

For the certain recovery of fastidious pathogens such as:
H. influenzae, D. pneumoniae, staphylococci, neisseriae, streptococci.

BLOOD AGAR BASE No. 2
preferably enriched with Defibrinated Horse Blood

This new formulation represents a considerable advance on conventional media and promotes growth of a wide range of pathogens. It is particularly useful for maximum recovery from minimal inocula.

For samples, information and a manual containing details of the Oxoid range, apply to:
OXOID LIMITED, SOUTHWARK BRIDGE RD., LONDON S.E.1

OXOID—for progressive laboratories
Antibiotic discs for sensitivity testing

Oxoid's wide range of single and multiple discs has been developed to give completely reproducible results.

Oxoid Sensitivity Discs are checked not only for their content of antibiotic, but also for their ability to release it on the medium. Each disc is marked with a symbol, clearly indicating the antibiotic and its level. They are vacuum dried during manufacture to a level of less than 0.1 per cent of moisture, to ensure stability and long shelf-life. They conform to standards laid down by the Antibiotics Division of the F.D.A.

The unique Oxoid medium, D.S.T. Agar Base, has been specifically developed for use with Sensitivity Discs.

Try time-saving Multodisks*

The 'Multodisk' carries six or eight antibiotics in a single unit—saving much time and effort. More than 40 different antibiotics are available in 22 standard combinations. For an order of 500 or more, Oxoid will provide any chosen combination at no extra cost.
