Oxoid Spore Strips give positive and dependable control of steam sterilization processes. They not only indicate that a temperature of 121°C. has been maintained for adequate time but they provide biological proof of sterilizing efficiency.

Each strip is impregnated with viable spores of Bacillus stearothermophilus (N.C.I.B. 8919) and sealed in a glassine envelope. Heat-resistance is carefully controlled to meet the criteria proposed by Kelsey (1961).

Oxoid Spore Strips are simple to use. During routine sterilization they can be packed with the normal work load and afterwards cultured in Oxoid Dextrose Tryptone Broth. They are available in the standard pack of 50 strips or in the special economy pack containing 250.

CONTENTS

S. Leskowitz. Production of hapten-specific unresponsiveness in adult guinea-pigs by prior injection of monovalent conjugates.

G. C. Sharp, H. H. Wortis and Beverly Dunmore. The biological effects of antithyroid antibodies. Thyroid eosinophilia following passive transfer of antithyroglobin antibody.

I. G. Morris. The transmission of bovine anti-Brucella abortus agglutinins across the gut of suckling rats.

J. H. Humphrey and M. M. Frank. The localization of non-microbial antigens in the draining lymph nodes of tolerant, normal and primed rabbits.

Antibiotic discs for sensitivity testing

Oxoid’s wide range of single and multiple discs has been developed to give completely reproducible results

Oxoid Sensitivity Discs are checked not only for their content of antibiotic, but also for their ability to release it on the medium. Each disc is marked with a symbol, clearly indicating the antibiotic and its level. They are vacuum dried during manufacture to a level of less than 0.1 per cent of moisture, to ensure stability and long shelf-life. They conform to standards laid down by the Antibiotics Division of the F.D.A.

The unique Oxoid medium, D.S.T. Agar Base, has been specifically developed for use with Sensitivity Discs.

Try time-saving Multodisks*

The ‘Multodisk’ carries six or eight antibiotics in a single unit—saving much time and effort. More than 40 different antibiotics are available in 22 standard combinations. For an order of 500 or more, Oxoid will provide any chosen combination at no extra cost.

For information and a manual containing details of the Oxoid range, apply to:

Microtiter

The Microtiter system for making serial dilutions has proved to be an essential tool in many of the leading hospitals, research centers, and universities. Because of savings in time, space, and reagents — this self-contained system is equally essential in private laboratories of microbiologists, immunologists, or virologists. It can perform eight serial dilutions simultaneously in minutes. The saving in reagents and sera alone is eight-fold.

When special tests are not feasible with the macro technique, or for routine tests, the Microtiter system provides absolute reliability and reproducibility.
