The History
of Difco
Quality Control...

and what it means to you today

Difco was developed by producing better products through control of quality.
Now there is a history of more than seventy years of dedication to accuracy and
dependability, specialized equipment, exacting materials control.
It's a history of a unique kind of control. Difco tests each ingredient before it is
accepted for use. Testing throughout preparation assures compatibility.
The finished product is then tested for dependable performance under the
conditions for which the product is intended. Result? Perfectly standardized
products that give reproducible results every time.

What does it mean to you?
Assured reliability. Savings in time and money.
Dependable microbiological results in your laboratory.

B&T are the sole concessionaire
for DIFCO products. A complete line of
microbiological reagents and media.

Brief Communication

The subscription price is £16, post free, per two annual volumes of six parts. Single parts are 30s. each, postage extra.

BLACKWELL SCIENTIFIC PUBLICATIONS
OXFORD AND EDINBURGH
In the next 12 months, will you have time to screen 1723 journals (in 16 languages) and review 30,000 original papers?

We will.

And not only review them, but also abstract them, concisely, accurately, and promptly—usually appearing in our abstract journals within two months of publication.

This primary material is now offered to you in the form of six monthly abstract services in specific disciplines of the bio-medical sciences by CCM Information Corporation:

Microbiology Abstracts:
- section A—Industrial
- Microbiology Abstracts:
  - section B—General & Bacteriology
- Virology Abstracts
- Genetics Abstracts
- Aquatic Biology Abstracts
- Calcified Tissue Abstracts

The annual subscription rate, including semi-annual and annual indexes, is $150 for each of the first five services; and $65 for Calcified Tissue Abstracts.

Each provides an author index and full bibliographical information, including complete author addresses, as well as semi-annual and annual author and subject indexes.

All services are prepared by the full-time professional staff of 12 professional abstractors of Information Retrieval, Ltd., of London. Thus the abstracts are of a high technical standard, responsive to the information needs of the user.

The source list has been compiled to include all significant new work in the field and contains publications in 16 languages. All abstracts are, of course, presented in English. In addition, abstracts of new patents from 32 countries are included as appropriate.

In the cumulative indexes, each abstract is listed under several subject headings, facilitating both search and selective reading.

CCM Information Corporation is one of the leading and fastest-growing companies applying advanced microform and computer processing to satisfy information needs, particularly in the life sciences, technology and education.

Microbial Growth
Edited by P. M. MEADOW and S. J. PIRT

A discussion of the mechanism of growth—both of populations and single cells—and of the regulation of the growth process at the molecular level. Many approaches described are new, and have been made possible by the development of such techniques as the stirred fermenter and continuous cultures of micro-organisms.

CAMBRIDGE UNIVERSITY PRESS

IMPERIAL COLLEGE Department of Biochemistry

Microbiologist required for research on genetic aspects of cell wall and amino acid biosynthesis in bacteria. Salary according to age and qualifications. Applications to Dr Elizabeth Work, Biochemistry Department, Imperial College of Science and Technology, London, S.W. 7.

Microbial Physiology and Continuous Culture

PROCEEDINGS OF THE THIRD INTERNATIONAL SYMPOSIUM ON CONTINUOUS CULTURE

Editors: E. O. POWELL, C. G. T. EVANS, R. E. STRANGE AND D. W. TEMPEST

Published by H.M.S.O. London (1967)
viii + 261 pp. U.K. Price: £3 post free Abroad $10 post free

The main object of the Third International Symposium was to discuss the reciprocal relationship between microbial physiology and continuous culture: how continuous culture is used to study microbial physiology; and how the physiology of the microbial cell affects the practice of continuous culture. This book contains nineteen papers presented at the Symposium.

Obtainable From:

Microbiological Research Establishment, Porton Down Salisbury, Wilts.
