Difco was developed by producing better products through control of quality. Now there is a history of more than seventy years of dedication to accuracy and dependability, specialized equipment, exacting materials control. It's a history of a unique kind of control. Difco tests each ingredient before it is accepted for use. Testing throughout preparation assures compatibility. The finished product is then tested for dependable performance under the conditions for which the product is intended. Result? Perfectly standardized products that give reproducible results every time.

What does it mean to you?
Assured reliability. Savings in time and money.
Dependable microbiological results in your laboratory.

B&T are the sole concessionaire for DIFCO products. A complete line of microbiological reagents and media.

Baird and Tatlock (London) Ltd.,
Postal Address: P.O. Box 1, Romford, RM1 1HA.
Situated at: Freshwater Road, Chadwell Heath, Essex.
IMMUNOLOGY
An Official Journal of the
BRITISH SOCIETY FOR IMMUNOLOGY

EDITOR: L. E. GLYNN

VOL. 17, NO. 6
DECEMBER 1969

CONTENTS

H. F. HAVAS. The effect of carrier protein on the immune response and on the induction of tolerance in mice to the 2,4-dinitrophenyl determinant.
P. S. SATOH, T. O. YOSHIDA, Y. FUKUSIMA, N. ONO, K. YOSHIDA and Y. ITO. Complement titration by rectilinear attenuation and attempts for its automatization.
R. KÅRESEN and T. GODAL. Induction of thyroiditis in guinea-pigs by intravenous injection of rabbit anti-guinea-pig thyroglobulin serum. II. Studies with fluorescent antibody technique.
CHRISTINA CHEERS and D. F. GRAY. Macrophage behaviour during the complaisant phase of murine pertussis.
D. F. GRAY and CHRISTINA CHEERS. The sequence of enhanced cellular activity and protective humoral factors in murine pertussis immunity.
I. C. M. MACLENNAN, G. LOEWI and A. HOWARD. A human serum immunoglobulin with specificity for certain homologous target cells, which induces target cell damage by normal human lymphocytes.
R. R. AVTALION. Temperature effect on antibody production and immunological memory, in carp (Cyprinus carpio) immunized against bovine serum albumin (BSA).
A. J. CUNNINGHAM. Studies on the cellular basis of IgM immunological memory. The induction of antibody formation in bone marrow cells by primed spleen cells.
PATRICIA C. BROWN and L. E. GLYNN. The recovery of immunological reactivity to some synthetic polypeptides containing proline after the induction of specific immunological tolerance.
HEATHER LEWIS, JUDITH MITCHELL and G. J. V. NOSAL. Subpopulations of rat and mouse thoracic duct small lymphocytes in the Salmonella flagellar antigen system.
D. T. ROWLANDS, Jr and MARY A. DUDLEY. The development of serum proteins and humoral immunity in oppossum 'embryos'.
O. J. WORDSWORTH and P. W. DYKES. Auto-allergic reactions following internal irradiation of the liver.
UTE GRÖSCHL-STEWART and DEBORAH DONIAECH. Immunological evidence for human myosin isoenzymes.
J. N. BLAU. The localization of BCG in the guinea-pig thymus with special reference to Hassall's corpuscles.
U. HÄMMERLING, N. SHIGENO, L. J. OLD and E. A. BOYSE. Labelling of mouse alloantibody with tritiated dL-alanine.

The subscription price is £16, post free, per two annual volumes of six parts. Single parts are 30s. each, postage extra

OXFORD AND EDINBURGH

(ii)
CONTENTS

A. C. Schram. Heterogeneity of the antigenic centres of albumin toward chicken antibodies.
F. Müller and M. Segerling. Comparative studies on the haemolytic and Treponema pallidum immobilizing complement activity in the serum of different species.
A. A. Glynn and Celia M. Priest. The effect of acriflavine on the complement sensitive and resistant strains of Escherichia coli and on complement resistant mutants.
M. E. J. Barratt and I. V. Herbert. Skin sensitizing antibody in experimental infections with Metastrongylus spp. (Nematoda).
T. A. McNeill. Antigenic stimulation of bone marrow colony forming cells. II. Properties of a serum factor responsible for antigenic enhancement of colonies.
M. C. Berenbaum and Ina M. Stringer. The localization of haemolytic antibody in sections of lymphoid organs: an improved method.
J. R. McNinch and R. Patterson. Reagin-like antibody formation in rabbits during a heterogeneous antibody response to Ascaris antigens.
G. L. Asherson and W. Pyak. Contact and delayed hypersensitivity in the mouse. III. Depression of contact sensitivity by pre-treatment with antigen and the restoration of immune competence in tolerant mice by normal lymphoid and bone marrow cells.
B. Nakić, O. Springer, A. Kaštelan and J. Mikuška. Quantitative analysis of the chimeric state in mice. III. Comparison of the colonizing capacities of syngeneic cell suspensions from different sources.

The subscription price is £16, post free, per two annual volumes of six parts. Single parts are 30s. each, postage extra

BLACKWELL SCIENTIFIC PUBLICATIONS
OXFORD AND EDINBURGH
This book is concerned mainly with equipment, rather than fermentation processes. It is intended as a practical reference for students and researchers, bringing together widely-dispersed information and relating it to practical experience gained in many laboratories.

The book deals mainly with the design and operation of fermentation and auxiliary equipment, instrumentation, sterilization, materials; and with the composition of culture media. It includes comprehensive commercial references to equipment and component parts, and, in many cases, the information needed for the fabrication of components. It will be of value to students of biochemical engineering and industrial microbiology, as well as academic and industrial researchers.

Contents:

Genetical Research
Volume 14, Number 2, October 1969

FRANCISCO J. AYALA Genetic polymorphism and interspecific competitive ability in Drosophila

J. S. LOUTIT Investigation of the mating system of Pseudomonas aeruginosa strain 1, V. The effect of N-methyl-N'-nitro-N-nitrosoguanidine on a donor strain

MICHAEL H. L. GREEN, JOHN DONCH, YOUNG S. CHUNG AND JOSEPH GREENBERG Effect of inhibition of DNA synthesis on u.v. sensitive Bs strains of Escherichia coli

A. C. MCBRIDE AND C. S. GOWANS The induction of gene mutation and chromosome aberration in Chlamydomonas eugametos by a phenylalanine analog

J. A. ROPER AND B. H. NGA Mitotic non-conformity in Aspergillus nidulans: the production of hypodiploid and hypohaploid nuclei

S. C. LAKHOTIA AND A. S. MUKHERJEE Chromosomal basis of dosage compensation in Drosophila. I. Cellular autonomy of hyperactivity of the male X-chromosome in salivary glands and sex differentiation

NAOMI C. FRANKLIN AND WILLIAM P. DOVE Genetic evidence for restriction targets in the DNA of phages λ and φ80

MICHAEL H. L. GREEN, JOSEPH GREENBERG AND JOHN DONCH Effect of a recA gene on cell division and capsular polysaccharide production in a lon strain of Escherichia coli

MARY F. LYON AND R. MERIDITH Muted, a new mutant affecting coat colour and ootoliths of the mouse, and its position in linkage group XIV

CAMBRIDGE UNIVERSITY PRESS
...the biologist's electron microscope with the most advanced specimen handling facilities

The ability to change specimen holders with ease and speed is a significant benefit built into the AEI EM801.

You can choose from:
(a) A specimen holder to carry six specimens at once.
(b) A specimen holder to tilt specimens ±20°
(c) A specimen holder to tilt specimens ±30°
(d) A specimen holder to examine a string of up to 250 serial sections.

All holders are of the plug-in type, directly interchangeable, and are electrically driven at a controlled speed. The objective focal length and resolution of the microscope does not alter with change of specimen holders. These advanced and versatile specimen handling facilities, coupled with a genuine 5A point-to-point resolution, are but some of the outstanding features of the AEI EM801.

Leadership through choice
AEI's strength in electron microscopy lies in long term development, the results of which enable them to offer a range of six other electron microscopes to meet most budget requirements and research applications.

EM7—The European million volt electron microscope.
EM8—3A resolution for ultimate resolution research.
EM802—Full goniometer facilities for crystallography.
EM6B—Long established and well tried high resolution instrument for biologists.
EM6G—A general purpose instrument for all research.
EM6M—A high quality medium-priced instrument for small budgets.
