The EM 801 Electron Microscope has been designed and built by AEI to give biologists the results they need. First of all, extraordinary Specimen Handling Facilities. Only 90 seconds to change a cartridge holding 6 specimens: to insert a holder for serial section examination, or to tilt specimens $\pm 20^\circ$, or $\pm 30^\circ$. In every case, without altering either objective focal length or resolution. All holders can be electrically driven at controlled speed, and can be plugged in immediately without breaking the main vacuum.

In addition, guaranteed point-to-point resolution of $5$ A.

This superbly designed instrument is one of many developed by AEI to assist you in the conduct of your research, with the accuracy and precision you have a right to expect from truly scientific apparatus. Above all, the EM 801 provides the facility to give you results without fuss, and without the need to dismantle any part of the instrument.

Fill in the coupon and we will send you an informative booklet with full details of this and the wide range of AEI Electron Microscopes.

As easily as you can fill in this coupon.

AEI Scientific Apparatus Ltd,
P.O. Box 1, Harlow, Essex, England.
