The not-so-simple simple S.E.M!

...the new

Cambridge Stereoscan 600

SCANNING ELECTRON MICROSCOPE

Yes, it's simple — simple to site, to accommodate, to operate, to maintain. Yet not so simple that it cannot provide you with most of the facilities of a full research-grade s.e.m. at less than half the cost.

Easy installation; no special environment; minimal operator training; can achieve 100 Å resolution; 25kV variable beam voltage; transmission facility; microanalysis capability.

Start with basic s.e.m. facilities; add others as needs grow.
