Rubrobacter aplysinae sp. nov. isolated from the marine sponge Aplysina aerophoba

Peter Kämpfer, Stefanie P. Glaeser, Hans-Jürgen Busse, Usama Ramadan Abdelmohsen and Ute Hentschel

IJSEM 64/Pt_3/705

The diagnostic amino acid is correctly given in the abstract as: Lysin. However, in the protologue, meso-Dpm is given.

Hence, the sentence in the species protologue: The characteristic diamino acid of the peptidoglycan is meso-diaminopimelic acid.

should be corrected to:

The characteristic diamino acid of the peptidoglycan is lysine.
