Corrigendum

Detection of measles virus genome in bone-marrow aspirates from adults

Satomi Sonoda, Mitsuo Kitahara and Tetsuo Nakayama

Page 2488, left-hand column, line 33 was incorrect. The sentence should read:

We conclude that the presence of the measles virus genome is not directly connected to the pathogenesis of illness but might be an asymptomatic infection, with no relationship between the detection of the measles virus genome and specific diseases.
